

“Moscow Compass” company specializes in manufacture of compasses for sports (orienteering) and for tourism.

Our compasses are specially designed to operate in extreme conditions, when required precise definition of the azimuth at fast walking and running.

Owing to the unique characteristics of compass needle - speed of return to the position of the North-South , the rate of damping oscillations and needle stability at movement - the compasses from “Moscow Compass” are recognized all over the world.

Models for tourism

Model 22

Tourist

Needle settling time: Good
Stability during running: None
Magnet: Powerful
Scale unit: 2 grad.

Model 22 is recommended for tourist and beginners in orienteering.

22C

22L

22XL

22XR

22R

22B

22M

Model 11

Universal

Needle settling time: 1,5-2 sek.
Stability during running: Good
Magnet: High-power
Scale unit: 2 grad.

Model 11 is recommended for orienteeris and skiold tourist.

11C

11L

11XL

11XR

11R

11B

11M

Sport modes

Model 2

Fast

Needle settling time: 0,5-1 sek.
Stability during running: Good
Magnet: Extra high-power
Scale: b/w, scale unit: 2 grad.

Recommended for orienteers, who prefer fast orienteering style. It is the fastest compass.

Model 3

Stable

Needle settling time: 1-1,5 sek.
Stability during running: Very good
Magnet: Extra high-power
Scale: w/b, scale unit: 2 grad.

Recommended for accurate azimuthal moving. Optimum combination of time of returning and stability of a needle.

Model 8

Rainbow-Stable

Needle settling time: 1-1,5 sek.
Stability during running: Very good
Magnet: Extra high-power
Scale: color, scale unit: 15 grad.

Recommended for orienteers who is using the new style of digital-color orienteering. The stable needle is used (like in model 3).

Model 9

Super-Stable

Needle settling time: 1,5-2 sek.
Stability during running: Excellent
Magnet: Extra high-power
Scale: None

The Model 9 is recommended for those orienteers preferring very accurate movement by azimuth.

Model 8* and 9* (with Star for Elite) have the same design. But thanks to new stabilization system, the needle has a higher stability at high running speed. Are intended for orienteers of national teams level.
